

Data Centre Services

*Reliability, security, scalability, connectivity
– designed & built in from day one*

DXN offers more than just housing and powering a rack. Our Data Centre Services provide you with what's needed to get running – an environment designed for world class reliability, telco and cloud connectivity and state of the art security plus what you need to help you grow – scalability, flexibility and affordability.

At the heart of our data centre design is an innovative and unique modular approach that allows for secure, personalised Tier III or Tier IV rack space for your technology infrastructure. This modular approach ensures that each data centre has capacity without compromise on reliability or quality.

Catering for the spectrum of computing densities, our modular building block approach allows us to quickly scale to meet your demand. Choose from Tier III or Tier IV compliant data centre modules with peace of mind from design certification by the Uptime Institute.

Carrier neutrality and access to a marketplace of over 100 cloud providers means you are assured of connecting the way you want, when you need to. All customers receive 10 Mbps of free Internet and you can upgrade to bandwidths of 10Gbps and beyond.

We understand that reliability must go hand in hand with security and our modular approach to building the data centre enhances your ability to segregate and physically secure your equipment. Our range of electronic security enables you to access the data centre, your racks and staging area at any time. Our mobile app can also be used to provide this access and give you complete visibility and control of your assets. This security, coupled with our data centre operations team, means we provide you with robust and reliable service levels.

Our data centres are conveniently located near the Sydney and Melbourne CBDs, allowing for easy customer access when required. We have solutions that allow you to access primary and back-up services across both our data centres or you can use our data centres in combination with your head office.

Ready Racks

All our full height equipment racks are ready for use with pre-provisioned multiple fibre cross connects to our carrier neutral telco rooms, dual diverse power rails and a complementary 10Mbps of Internet access included for each customer that can be scaled to suit your needs.

Secure

Our facility has electronic access control that secures the facility perimeter plus restricted access to individual data centre modules only with optional electronic rack access control.

Tier III & IV Certified

Our data centre modules have Tier III Concurrent Maintainability or Tier IV Fault Tolerant design certification by the Uptime Institute.

Modular Design & Build

Our modular design is an innovative and non-constrained approach to the traditional data centre model. Customise environmental and physical security to suit your requirements, all certified by the Uptime Institute.

Cloud Connectivity

Our cloud marketplace gives you direct access to Cloud Providers including Amazon Web Services, Microsoft Azure and IBM Softlayer all through enabling a simple cross connect.

Scalability

As you grow, we can meet your power demands with 2KW to 23KW rack allowances. We can also reserve rack space so that you have contiguous space.

Carrier Neutral

As a carrier neutral facility, your choice of carriers for your connectivity and diversity needs is not restricted.

Flexibility

Customised modules can be designed and constructed to meet your specific technical and operational requirements – and we provide SLAs to meet those requirements.

Cost Effective

Our modular design means that we can provide innovative cost-effective solutions to house your IT assets today without constraining your future growth.

Locations

Our western Sydney and Melbourne locations provide easy access whilst being suitable distances from the CBD and other data centres – perfect for diverse and backup arrangements.

GIVING YOU THE EDGE

We believe in challenging the status quo of how modern data centres enable the edge
